					specified on an Override Database File (OVRDBF) command, or the member has the SHARE(*YES) attribute specified. This program is trying to open the member with open options different from the first open of member 02 in this job or thread within this job. This message is sent only on the first shared open with options that are not the same as those options specified on the first open operation. The type code is 1. The type codes and their meanings follow: 1 - The input, output, update, or delete options are not the same as or a subset of those specified on the first open operation. 2 - User buffering was requested on either the first open operation or the shared open or both. 3 - The shared open requested to clear the member. 4 - A POSITION other than *NONE was specified by the shared open. 5 - The shared open requested key feedback and the first open operation did not. 6 - The record length is greater than the record length used on the first open operation. 7 - The selection of record formats is not the same as that specified on the first open operation. 8 - The arrival sequence option is not the same as that specified on the first open operation. 9 - The record lock stacking option is not the same as that specified on the first open operation. 10 - The shared open requested that the control list should be used for I/O operations and the first open operation requested that it should not be used. 11 - The shared open requested that the control list should not be used for I/O operations and the first open operation requested that it should be used. 12 - The shared open requested duplicate key feedback and the first open operation did not. 13 - The shared open requested insert key feedback and the first open operation did not. Recovery . . . : The file was opened. If the ignored options are required, specify SHARE(*NO) on the OVRDBF command to override the file. Technical description : Type codes 10 and 11 refer to the control list. The control list is a structure that is passed to I/O modules. It contains information such as the requested format.

					Message : Open of member VTSREG was changed to SEQONLY(*NO).					
					Cause : Member VTSREG file VTSREG in library VSTAXD was opened					
					with the SEQONLY(*YES) parameter specified in the program or on the Override					
					Database File (OVRDBF) command. However, the parameter has been changed to					
					SEQONLY(*NO) because of condition 1 shown below: 1 - The program opened					
					member VTSREG for output operations only and SEQONLY(*YES) was specified					
					with the default number of records. SEQONLY(*YES) was changed to					
					SEQONLY(*NO) to allow the program to handle duplicate key, conversion					
					mapping, key mapping, and select or omit errors, or both select and omit					
					errors at the time of the output operation. 2 - The program opened the					
					member for other than input or output operations only. 3 - The program					
					opened a logical file member for output operations only and that member is					
					based on more than one physical file member. 4 - The record length plus the					
					feedback information for the member is greater than 32,767 bytes. 5 - The					
					commitment control level of *ALL is active and the member was opened for					
					input operations only, or the commitment control levels of either *ALL, *CS,					
					or *CHG were specified for a distributed file that was opened for input					
					operations only. 6 - The program opened member VTSREG for output operations					
					only and SEQONLY(*YES) was specified with the default number of records and					
					duplicate key feedback or insert key feedback was requested. SEQONLY(*YES)					
					was changed to SEQONLY(*NO) to allow duplicate key feedback or insert key					
					feedback to be provided on a record by record basis. 7 - The program opened					
					a query member that contains at least one subselect. Either the outermost					
					subselect provided a correlated reference for a subquery or the outermost					
					subselect processed a subquery with an IN, = ANY, or <> ALL subquery					
					predicate operator, which is treated as a correlated reference. Only one					
					record can be retrieved at a time from this type of query. 8 - The file has					
					referential constraints, triggers, or is a distributed file. SEQONLY(*YES)					
					was changed to SEQONLY(*NO) to allow the trigger programs to be called or					
					the referential constraints to be enforced on a record by record basis, or					
					because SEQONLY(*YES) is not allowed for the distributed file open. 9 - The					
					file is a distributed file opened for DSTDTA(*CURRENT). One or more of the					
					nodes in this file have been implemented using join logical file processing.					
					10 - The file, or a physical file on which the file is based, contains File					
					Link Control DataLink fields. SEQONLY(*YES) was changed to SEQONLY(*NO) to					
					allow the DataLink fields in each record to be processed. Recovery . . . :					
					For condition 1 or condition 6: -- If changing parameter SEQONLY(*YES) to					
					SEQONLY(*NO) is not acceptable, use the Override Database File (OVRDBF)					
					command to override the parameter SEQONLY(*NO) by specifying SEQONLY(*YES N)					
					where N indicates the number of records. Then try your request again.

					Statement	: 1000001				
					Message	: Open of member REPHI was changed to SEQONLY(*NO).				
					Cause	: Member REPHI file REPHI in library RBTREPLIB was opened with the SEQONLY(*YES) parameter specified in the program or on the Override Database File (OVRDBF) command. However, the parameter has been changed to SEQONLY(*NO) because of condition 1 shown below: 1 - The program opened member REPHI for output operations only and SEQONLY(*YES) was specified with the default number of records. SEQONLY(*YES) was changed to SEQONLY(*NO) to allow the program to handle duplicate key, conversion mapping, key mapping, and select or omit errors, or both select and omit errors at the time of the output operation. 2 - The program opened the member for other than input or output operations only. 3 - The program opened a logical file member for output operations only and that member is based on more than one physical file member. 4 - The record length plus the feedback information for the member is greater than 32,767 bytes. 5 - The commitment control level of *ALL is active and the member was opened for input operations only, or the commitment control levels of either *ALL, *CS, or *CHG were specified for a distributed file that was opened for input operations only. 6 - The program opened member REPHI for output operations only and SEQONLY(*YES) was specified with the default number of records and duplicate key feedback or insert key feedback was requested. SEQONLY(*YES) was changed to SEQONLY(*NO) to allow duplicate key feedback or insert key feedback to be provided on a

-------	------	-----	------	------	----------	---------	------	--------	---------	------

record by record basis. 7 - The program opened a query member that contains at least one subselect. Either the outermost subselect provided a correlated reference for a subquery or the outermost subselect processed a subquery with an IN, = ANY, or <> ALL subquery predicate operator, which is treated as a correlated reference. Only one record can be retrieved at a time from this type of query. 8 - The file has referential constraints, triggers, or is a distributed file. SEQONLY(*YES) was changed to SEQONLY(*NO) to allow the trigger programs to be called or the referential constraints to be enforced on a record by record basis, or because SEQONLY(*YES) is not allowed for the distributed file open. 9 - The file is a distributed file opened for DSTDTA(*CURRENT). One or more of the nodes in this file have been implemented using join logical file processing. 10 - The file, or a physical file on which the file is based, contains File Link Control DataLink fields. SEQONLY(*YES) was changed to SEQONLY(*NO) to allow the DataLink fields in each record to be processed. Recovery . . . : For condition 1 or condition 6: -- If changing parameter SEQONLY(*YES) to SEQONLY(*NO) is not acceptable, use the Override Database File (OVRDBF) command to override the parameter SEQONLY(*NO) by specifying SEQONLY(*YES N) where N indicates the number of records. Then try your request again.

Message . . . : Job 419548/SWFOPS/PPR200PDY ended on 01/19/11 at 22:02:16; 5 seconds used; end code 0 .										

Cause . . . : Job 419548/SWFOPS/PPR200PDY completed on 01/19/11 at 22:02:16 after it used 5 seconds processing unit time. The job had ending code 0. The job ended after 1 routing steps with a secondary ending code of 0. The job ending codes and their meanings are as follows: 0 - The job completed normally. 10 - The job completed normally during controlled ending or controlled subsystem ending. 20 - The job exceeded end severity (ENDSEV job attribute). 30 - The job ended abnormally. 40 - The job ended before becoming active. 50 - The job ended while the job was active. 60 - The subsystem ended abnormally while the job was active. 70 - The system ended abnormally while the job was active. 80 - The job ended (ENDJOBABN command). 90 - The job was forced to end after the time limit ended (ENDJOBABN command). Recovery . . . : For more information, see the Work Management topic in the Information Center,
<http://www.ibm.com/eserver/series/infocenter>.
